

Clean Set of Claims

Sub 1  
a1  
1. A notification module for a voice messaging system, comprising:  
an auto dialing calling module adapted to initiate a communication  
with a user at a remote location; 40-54

a table associating particular events with a need for notification of  
said user; and

a controller to activate said auto dialing calling module to notify said  
user upon satisfaction of a particular event; 390 Fig. 3

wherein said satisfaction of said particular event is determined col. 8  
based on a comparison of a plurality of entries in said table to call related 5-78  
information contained in a log.

Sub 2  
a2  
16. A method for notifying a user of a voice messaging system or  
other designated party upon satisfaction of a predetermined event based on  
logged call related information regarding incoming calls, comprising:

logging a plurality of entries of call related information as it is col. 8  
received by said voice messaging system; 27-32

reviewing said plurality of entries of logged call related information col. 8  
for satisfaction of a predetermined event by more than one incoming call based 57-68  
on said logged call related information; and

notifying a remote user with a notification message in response to col. 9 2015D  
satisfaction of said predetermined event. 17- line 10

23. Apparatus for notifying a user of a voice messaging system or other designated party upon satisfaction of a predetermined event based on logged call related information regarding incoming calls, comprising:

means for logging a plurality of entries of call related information as it is received by said voice messaging system;

means for reviewing said plurality of entries of logged call related information for satisfaction of a predetermined event by more than one incoming call based on said logged call related information; and

means for notifying a remote user with a notification message in response to satisfaction of said predetermined event.
